Description			
<p>Hello,</p> <p>I did a Debian package of Lima, it install the Lima python module unders /usr/lib/python2.6/dist-package/Lima</p> <p>it seems that everythong is fine, we can control the Andor3 camera. but I found a very strange comporment of Lima</p> <p>if I start by a import Lima.Andor3, I get this error message</p> <p>In [1]: import Lima.Andor3</p> <p>-----</p> <p>ImportError Traceback (most recent call last)</p> <p>/home/picca/<ipython console> in <module>()</p> <p>/usr/lib/python2.6/dist-packages/Lima/Andor3/__init__.py in <module>() 51 sys.setdlopenflags(ld_open_flags DLFCN.RTLD_GLOBAL) 52 ---> 53 from Lima.Andor3.limaandor3 import Andor3 as A 54 globals().update(_A._dict_) 55</p> <p>ImportError: No module named processlib</p> <p>but I do not get this message if before importing the camera I do</p> <p>import Lima.Core import Lima.Andor3</p> <p>Is it possible to fix this problem and allow a strait import Lima.Andor3</p> <p>In [1]: import Lima.Core</p> <p>In [2]: import Lima.Andor3</p> <p>In [3]:</p> <p>thanks</p> <p>Frederic</p>
