

ISPyB4 - ToDo #2839

Create a script/method to check the version of the database and propose to run the missing update scripts

26/10/2016 12:16 PM - Delageniere, Solange

Status:	New	Start date:	26/10/2016
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Description			
Add a new table "ispyb_schema_version" in pydb containing at least 3 columns: Version, Status, Date.			
Each time an update script has been successfully executed, insert a new entry in this table with status = success			
The "check" script will scroll all the update scripts present in the folder and compare them to the version stored in the table.			
The script will propose to run the update scripts not already run.
