

CrysFML - Feature #775

Graphical CrysFML version using a free GUI library like pilib or japi

20/10/2010 11:59 AM - Hunger, Jens

Description			
<p>Since the Winteracter GUI library is a commercial one, it will be desirable to have also an additional port to a free GUI library like pilib (http://pilib.beta-centauri.de) or japi (http://www.japi.de). Personally I preferred to use japi in some projects - but obviously the development of japi is not continued. Therefore it is now maybe a better idea to use pilib, if one don't want to do further development of the java-based japi kernel.</p>

Since january GTK+ Fortran bindings were developed (<https://github.com/jerryd/gtk-fortran>), which will be a good alternative soon.
